

## CHM® TLC developing chambers (Tanks)

[Request additional information](#)

### Full description

They are manufactured from sturdy moulded glass bricks that will withstand regular use for many years. The clear sides allow unobstructed visual inspection of TLC plates up to 20 x 20 cm. The top of the tanks has been ground to a uniform flatness for perfect lid and the edges have been bevelled to remove any sharp edges. The bottoms are ground to provide a flat, level surface.

A special model with thick-walled clear glass tank grooved is designed to accept up to five 200x200 mm TLC plates, and it is particularly used for quantitative analysis, serving also to store plates in a protected environment.

### Product specification
